BASILISK 4L

RIGHTLINE BASILISK 4L is a Pre-emergent herbicide with a built-in soil surfactant for long-lasting control of crabgrass, goosegrass and many other annual grasses and broadleaf weeds.

Basilisk 4L herbicide provides selective Pre-emergent control of crabgrass, goosegrass, Poa annua, foxtail, spurge, henbit, chickweed and more than 35 annual grasses and broadleaf weeds in established lawns, sod nurseries, sports turf, golf course fairways, roughs and tee boxes, landscape and nursery ornamentals, Christmas tree farms and non-crop areas. Its built-in soil surfactant system lowers spray-solution surface tension and moves prodiamine into the soil surface, even on water-repellent soils, for a more uniform weed barrier right where seeds germinate.

Named for the basilisk, the legendary "little king" of serpents that Pliny the Elder wrote "burns up all the grass." Ours is more selective: it stops the weeds and leaves your turf standing.

- Use on a wide range of cool and warm-season turfgrass species
- 4 lb/A.I. prodiamine liquid formulation (40%), HRAC Group 3
- Built-in soil surfactant cuts spray surface tension about in half. In lab tests, droplets soaked into water-repellent sand in about 1 second vs. more than 5 minutes for water
- Long-lasting residual control; single or split applications for spring and fall programs
- Effective on more than 35 grassy and broadleaf weeds
- Activate with at least 1/2 inch of rain or irrigation within 14 days of application
- Also labeled for ornamentals, nurseries, Christmas tree farms and non-crop areas
- Caution signal word
- Packaged in 2 x 2.5 gallon containers

Application Rate (fl oz/ Acre*)	Application Rate (fl oz/1,000 sq. ft.*)
10 – 48	0.23 – 1.1

*Rates vary by turfgrass species. Do not apply to golf course putting greens. See label for specific rates and timing.
